# 1 Introduction

LMNL.app is a social media platform that is designed to prioritize quality over quantity. Unlike many traditional social media platforms that encourage its users to spend endless amounts of time scrolling content using highly optimized algorithms, LMNL enforces daily limits on posts, views, likes, and comments the users can make. By enforcing these hard limits, the app creates a space where users are encouraged to be more selective with what they share, and how they interact with other users. Furthermore, the content feed of our users only contains a fixed number of posts per day, allowing the user to truly interact with what matters to them in a predictable time frame, while leaving the noise and addictive mindless content for the traditional platforms.

The general audience of our app includes individuals who enjoy social media but also value their digital wellbeing, as well as individuals who refrain from social media to not be drawn in by its addictive nature. Such individuals may include the public, working professionals, and students, who typically do not have a lot of spare time. The main problem our app solves is time consuming addictive nature of unlimited and highly optimized content. The app solves the problem by directly setting hard limits on the unlimited nature of traditional social media platform, which enforces quality over quantity.

This project vision document lays out the purpose, scope, and limitations of our project for our users and stakeholders. The purpose of this document is to allow us to communicate the need, potential solution, benefits and features.

## 1.1 Scope

The scope of our project includes coding and development, along with extensive testing of user interfaces, and features, as well as debugging. It also includes a working Android and iOS application with locally hosted server and database, and also adequate documentation in the form of a properly documented code base and additional documents as needed.

Similarly, the following out of scope aspects include domain and hosting purchase, any future maintenance or bug fixes, and publishing apps in the App Store or Google Play Store.

### 1.1.1 In Scope

| Project Scope |
|---|
| Code development |
| Documentation |
| Testing & Debugging |
| Android & iOS app |
| Locally hosted |

### 1.1.2 Out of Scope

| Project Out-of-Scope |
|---|
| Cloud hosting |
| Domain purchase |

| |
|---|
| Setting up external server |
| Future maintenance |
| App publishing |

## 1.2 Definitions, Acronyms, and Abbreviations

*This section explains all of the terms and abbreviations that are being used in this document, for those who are unfamiliar with them. Not everybody who reads this document will understand all of the terms, so this section is helpful.*

| Term | Explanation |
|---|---|
| Domain | An easy to remember web address following www that directs the user to the correct hosting server where the application or website is hosted. |
| Cloud/Hosting | A server where the application or website resides. |
| | |
| | |
| | |
| | |
| | |
| | |

## 1.3 References

*<This subsection provides a complete list of all documents referenced elsewhere in the Project Vision. Identify each document by title, report number if applicable, date, and publishing organization. Specify the sources from which the references can be obtained. This information may be provided by reference to an appendix or to another document>*

# 2 Positioning

## 2.1 Business Opportunity

Given the number of social media platforms and abundance of content, there is a growing demand for digital wellbeing amongst many users. Traditional social media platforms are designed to maximize screen time from its users with endless highly optimized feeds that offer no real benefit to the user. LMNL provides an alternative where user feeds and interactions are limited, which enforces quality over quantity. Additionally, LMNL prioritizes digital wellbeing through intentional and meaningful interactions, as well time conscious usage given the limited feed the user can see.

## 2.2 Problem Statement

The problem with traditional social media platforms is that they all offer essentially the same features and experience to the user. Similarly, all platforms focus on maximizing screen time from users and allow users to engage with no limits that promote lower quality form of communication. Additionally, they do not prioritize digital wellbeing of users.

| | |
|---|---|
| The Problem of | Market is saturated with social media platforms that offer the same or overlapping features. |
| affects | Users that want something unique and new. |
| the impact of which is | Same content is often reposted on other platforms with the same set of features. There is no real differentiation with similar user experience on all those apps. |
| a successful solution would be | A platform that introduces limits of all user interactions which promotes better content, not just reposted content from other platforms. |

| | |
|---|---|
| The Problem of | Current social media platforms encourage maximum screen time from its users with endless feeds. |
| affects | Users with limited spare time such as students and working professionals. |
| the impact of which is | Loss of productivity and increased digital fatigue from extended screen time usage. |
| a successful solution would be | Hard limit on number of posts shown on the user feed. That way the user can still engage on social media with better ideas of how much time they can spend on it. |

| | |
|---|---|
| The Problem of | Current platforms allow users to interact with unlimited likes and comments. Many comments under posts are often spam or irrelevant, providing no real value. |
| affects | Users that want to engage intentionally and learn from comments section. |
| the impact of which is | Low value comments and desensitized to likes. |
| a successful solution would be | Setting limits on user interactions will promote more intentional and real interactions while also ensuring likes and comments carry more weight. |

## 2.3 Product Position Statement

| | |
|---|---|
| For | General users, students, and working professionals who like social media but have limited time and value their digital wellbeing. |
| Who | Users who want to engage in social media but do not want to be subjected to endless feed with low value interactions. |
| The LMNP.app | LMNL is a social media platform designed to be different from mainstream platforms. |
| That | By introducing hard limits on feeds and interactions that promote quality over quantity of the content. |
| Unlike | Traditional platforms that maximize screen time with unlimited interactions. |
| Our product | An alternative to the traditional platforms, where the users can still make sure of social media but with limitations that promote higher value content and digital well being. |

**Table 1 Product Position Statement**

## 2.4 SWOT Analysis

**<Reference: https://www.businessballs.com/strategy-innovation/swot-analysis/)**

| **Strengths** | **Weaknesses** |
|---|---|
| Unique proposition: enforced daily limits on posts, likes, and comments. | Lack of traditional addictive engagement loops may reduce user growth speed. |
| Focus on digital wellbeing, setting LMNL apart from traditional platforms. | Limited features compared to mainstream competitors (no infinite scroll, fewer interactions). |
| Predictable usage time — attracts students and professionals with limited spare time. | Still dependent on user adoption in a saturated market. |
| Privacy and security concerns in managing local servers. | Privacy and security concerns in managing local servers. |
| **Opportunities** | **Threats** |
| Growing awareness and demand for digital wellbeing. | Strong competition from established platforms (Instagram, TikTok, X). |
| Potential partnerships with educational institutions or workplaces to promote healthy tech use. | Risk of being perceived as “too limiting” and losing engagement. |
| Expansion into niche communities seeking intentional, quality-focused social interactions. | Technical challenges in scaling if user base grows rapidly. |
| Future monetization through premium features (analytics, curated communities). | Privacy and security concerns in managing local servers. |

# 3 Stakeholder and User Descriptions

< This section provides a profile of the stakeholders and users involved in the project, and the key problems that they perceive to be addressed by the proposed solution. It does not describe their specific requests or requirements as these are captured in a separate stakeholder requests artifact. Instead, it provides the background and justification for why the requirements are needed>

## 3.1 Stakeholder Summary

< There are a number of stakeholders with an interest in the development and not all of them are end users. Describe and list the project stakeholders>

| Stakeholder Name | Represents | Role |
|---|---|---|
| Project Team (Devs) | Developers, testers, and designers | Responsible for coding, debugging, testing, and documenting the app. |
| Faculty/Instructor | Academic supervisor(s) | Provides guidance, reviews progress, and ensures academic compliance. |
| End Users | Students, professionals, general public | Primary users who will interact with the app. |
| Test Participants | Volunteer beta testers | Provide feedback on usability and experience. |
| Project Manager | Coordination lead | Oversees timeline, requirements, and deliverables. |

**Table 2 Stakeholder Summary**

## 3.2 User Summary

< Present a summary list of all identified users of the system >

| User Name | Description | Responsibilities | Stakeholder |
|---|---|---|---|
| Student Users | Time-conscious social media users | Engage within app limits, provide feedback on usability. | End Users |
| Professionals | Working adults seeking digital wellbeing | Test app features, validate balance of quality vs. quantity. | End Users |
| General Public | Everyday social media users | Explore features, compare with mainstream apps, provide adoption feedback. | End Users |
| Testers | Selected group of evaluators | Identify bugs, provide suggestions, help refine UX. | Test Participants |

**Table 3 User Summary**

# 4 Stakeholder Requirements

| ID | Requirement | Stakeholder |
|---|---|---|
| SR1 | The system must limit number of daily posts, likes, and comments. | End Users |
| SR2 | The app must be available on Android and iOS platforms. | Project Team |
| SR3 | The system must provide a predictable, capped content feed. | End Users |
| SR4 | The app must support locally hosted database and server. | Developers |
| SR5 | The system must include adequate documentation for future developers. | Faculty/Instructor |

**Table 4 Stakeholder Requirements**

# 5 System Features

| ID | Feature | Stakeholder Requirement ID |
|---|---|---|
| F1 | Daily post, like, and comment limits. | SR1 |
| F2 | Cross-platform availability (Android/iOS). | SR2 |
| F3 | Fixed daily feed of posts. | SR3 |
| F4 | Local database and server functionality. | SR4 |
| F5 | Documented codebase and supporting documents. | SR5 |

**Table 5 System Features**

# 6 Assumptions

- Users will prefer meaningful, intentional interactions over addictive scrolling.
- A limited feed model will encourage higher content quality.
- Limited interactions will encourage meaningful interactions.
- Platform can differentiate itself by emphasizing quality over quantity and digital wellbeing.
- Initial early adoption would likely be from students and professionals looking for social media alternatives.
- Brands would consider advertising on a platform with non intrusive ads with a userbase of educated professionals.

- Target audience (students and professionals) values time management and digital wellbeing.
- Local hosting will be sufficient for initial project scope and testing.

# 7 Constraints

- No cloud hosting or domain setup allowed (local only).
- No app publishing to App Store or Google Play as part of project scope.
- Limited development timeline (academic semester).
- Team resources (skills, time) restricted to student capacity.
- Device support limited to Android and iOS mobile environments.
- Userbase limited to the development team, client, and testers.
- Integration with payment services (for advertising) is out of scope.
- Posts are limited to text and images only.
